KEY FEATURES

High Growth Potential

Upside Potential

Monthly Distributions

Cboe S&P Health care Select Sector Half BuyWrite Index

The Index (BXLVH) measures the total rate of return of a hypothetical half “covered call” strategy applied to the Health Care Select Sector Index (IXV), using a long position in the IXV Index and a 50% short position in a call option on the Health Care Select Sector SPDR ETF (XLV) expiring monthly.

INDEX COMPONENT

The Cboe S&P Health Care Select Sector Half BuyWrite Index is half-covered, meaning that the amount of written theoretical call options has a notional value of half the notional value of the long Health Care Select Sector Index position.

- Health Care Select Sector Index Component:
 - Comprised of the constituents of the Health Care Select Sector Index, which measures the total return of companies listed in the US that are classified as Health Care under the S&P GICS Sector Classification system within the S&P 500 Index.
 - Follows the weighting scheme that governs the Health Care Select Sector Index.
 - Reconstituted annually on the third Friday of September, as per the Health Care Select Sector Index annual rebalance schedule.
 - Reviewed for qualified new issue of common equities quarterly on the third Friday of March, June, September, and December as per the Health Care Select Sector Index schedule.
- “Covered Call” Option Component:
 - The BXLVH Index requires that each XLV call option in the hypothetical portfolio be held until the day before its date of maturity, i.e., preceding the standard monthly listed option expiry date.
 - The call option written is a model-based option and the strike of the respective XLV call option is the listed option strike closest to the Volume-Weighted Average Price (VWAP) of XLV trade prices from 12:59 p.m. ET to 1:00 p.m. ET on the roll date. Once the strike price of the new call option has been identified, the new call option is deemed sold at a price equal to the theoretical value of the relevant call option at 2:00 pm on the same day.

*For the complete and current index methodology please refer to the index provider's website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

Notional amount refers to the total market value of securities or index value referenced by an option.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund's investment objectives, risks, and charges and expenses before investing. This and other information can be found in the fund's full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject HYLG to loss due to adverse occurrences that may affect that industry or sector. Investors in HYLG should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses. The health care industry could be adversely affected by various political, regulatory, supply-and-demand, and other economic factors.

HYLG engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset, in this case U.S. common equities, and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price, but continues to bear the risk of a decline in the index. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price. HYLG is non-diversified.
