The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. [Click here](#) for standard performance as of the most recent quarter-end.

SECTOR BREAKDOWN (%)

* Materials 2.44%, Real Estate 2.28%

All Sector, Industry and Geographic breakdowns, where provided, are based on equity positions held by the ETF and exclude cash, currencies, and other holdings.

DEFINITIONS

Cboe S&P 500 Risk Managed Income Index	The Underlying Index measures the performance of a risk managed income strategy that holds the underlying stocks of the S&P 500 Index and applies an options collar strategy (i.e., a mix of short (sold) call options and long (purchased) put options) on the S&P 500 Index. The Underlying Index specifically reflects the performance of the component securities of the S&P 500 Index, combined with a long position in the 5% out-of-the-money ("OTM") put options and a short position in at-the-money ("ATM") call options, each corresponding to the value of the portfolio of stocks in the S&P 500 Index. The options collar seeks to generate a net-credit, meaning that the premium received from the sale of the call options will be greater than the premium paid when buying the put options.
S&P 500 Index	S&P 500 Index tracks the performance of 500 leading U.S. stocks and captures approximately 80% coverage of available U.S. market capitalization. It is widely regarded as the best single gauge of large-cap U.S. equities.
12-Month Trailing Yield	The distribution yield an investor would have received if they had held the Fund over the last twelve months, assuming the most recent NAV. The 12-Month Trailing Yield is calculated by summing any income, capital gains and return of capital distributions over the past twelve months and dividing by the sum of the most recent NAV and any capital gain distributions made over the same period.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject XRMI to loss due to adverse occurrences that may affect that industry or sector. Investors in XRMI should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

XRMI engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A collar strategy involves holding shares of the underlying stock while simultaneously buying put options and selling call options against that holding. XRMI writes covered call index options on the and purchases put options on S&P 500 Index. By selling covered call options, the fund limits its opportunity to profit from an increase in the price of the underlying index above the exercise price. By purchasing put options, in return for the payment of premiums, the Fund may be protected from a significant decline in the price of the S&P 500 Index if the put options become in the money (S&P 500 closes below the strike price as of the expiration date); but during periods where the S&P 500 Index appreciates, the Fund will underperform due to the cost of the premiums paid. A liquid market may not exist for options held by the Fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the indices current market price. The information provided is not intended for trading purposes, and should not be considered investment advice.

This material must be preceded or accompanied by the current fund prospectus. Read it carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
