Efficient Options Execution

CBOE S&P 500 TAIL RISK INDEX (TICKER: PPUT3M)

The Index measures the total rate of return of a hypothetical protective put strategy applied to the S&P 500 Index. The Index consists of a long "S&P 500 Index Component" and a "Protective Put Component".

REBALANCES/REVIEWS

S&P 500 Index Component

- Comprised of the constituents of the S&P 500 Index, which measures the total return of 500 leading companies listed in the US.
- Follows the weighting scheme that governs the S&P 500 Index.
- Reconstituted annually on the third Friday of September, as per the S&P 500 Index schedule.
- Reviewed for qualified new issue of common equities quarterly on the third Friday of March, June, September, and December as per the S&P 500 Index schedule.

Protective Put Component

- Comprised of a long position in quarterly 10% out-of-the-money put options⁽¹⁾ referencing the S&P 500 Index.
- The put options deemed purchased on the third Friday of a quarter are usually held to the open of the third Friday in the next quarter when options referencing the S&P 500 Index expire. Subsequent to the settlement of the expiring put options, new out-of-the-money put options expiring in the next quarter are purchased corresponding to the value of the S&P 500 Index Component. The strike price of the new put options, which is the price the put options can be exercised at expiration, is the closest listed strike price greater than or equal to 90% of the last value of the S&P 500 Index reported before 11:00am ET.
- Dividends paid on the component stocks underlying the S&P 500 Index are functionally reinvested in the S&P 500 index portfolio.

For more information on the Index, please visit Cboe's website.

⁽¹⁾An out-of-the-money put option conveys the right, but not the obligation, to sell an underlying asset at a strike price below that underlying asset's market price

*For the complete and current index methodology please refer to the index provider's website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund's investment objectives, risks, and charges and expenses. This and other information can be found in the fund's full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject XTR to loss due to adverse occurrences that may affect that industry or sector. Investors in XTR should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

The Fund engages in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon strike price within a certain period or on a specific date. By purchasing put options, in return for the payment of premiums, the Fund may be protected from a significant decline in the price of the S&P 500 Index if the put options become in the money (S&P 500 closes below the strike price as of the expiration date); but during periods where the S&P 500 Index appreciates, the Fund will underperform due to the cost of the premiums paid. A liquid market may not exist for options held by the Fund.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.
